Project: “Construction of New International Sea port in Turkmenbashi”

Altyn Yoda Logistics was nominated and honored to be a Forwarder of Trust for Liebherr Werk Nenzing GmbH Company in transportation of harbour mobile cranes from Europe towards to Turkmenistan. Liebherr is one of the largest construction machine manufacturers in the world who has put in production 42 units for this project.

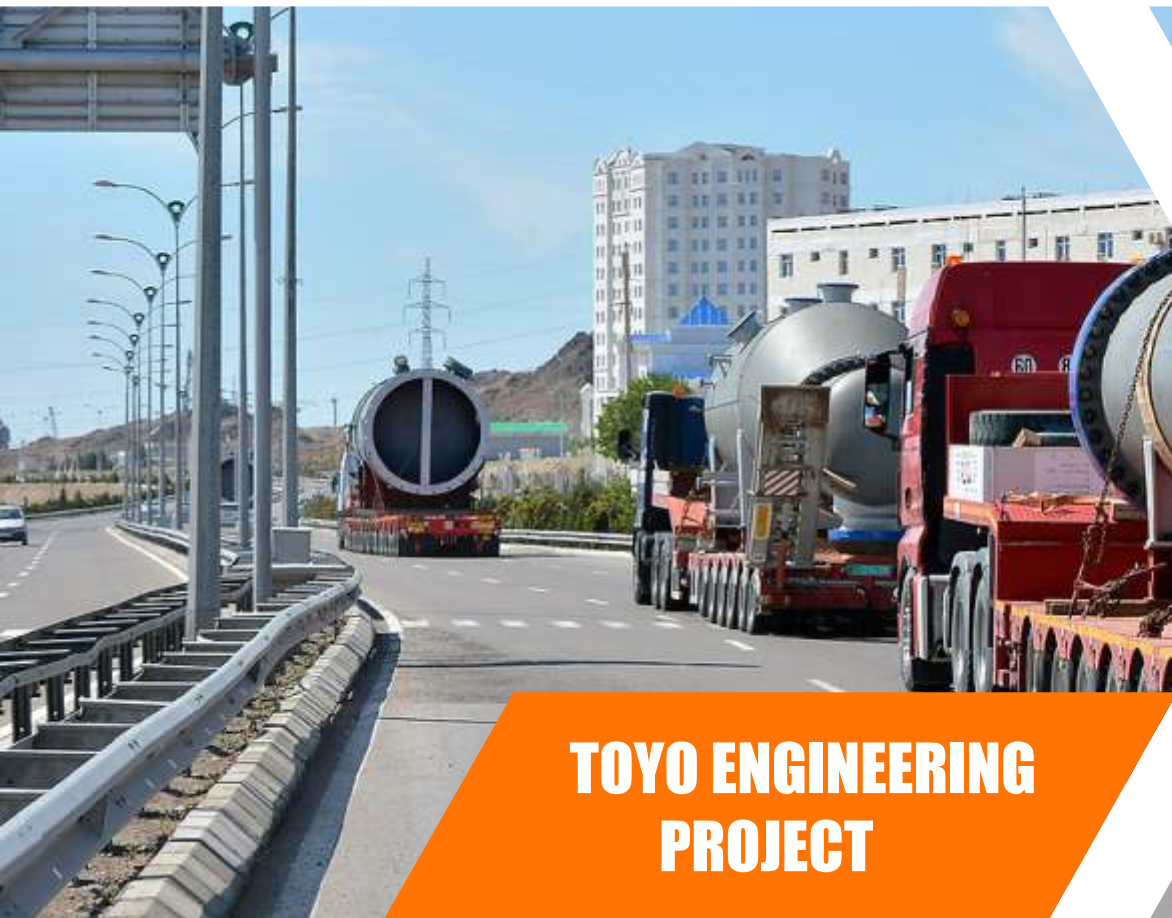

In middle of 2016, Altyn Yoda Logistics has successfully delivered 2xLHM280 cranes from Rostock, Germany up to Turkmenbashi through Volga – Don Channel. Volume / weight of cranes 4068 FT delivered.

In October 2016, Altyn Yoda Logistics organized sea freight of 6xLRS545 Reachstackers in assembled type from Sunderland, UK via Rostov, RF till to Turkmenbashi port. with volume of 2187 FT.

Our company was providing full range of services

- ❖ Supervision / Load Reporting
- ❖ Sea Freight of project cargo including heavy lifts & oversized units
- ❖ Transit customs formalities in Russia handling in complete accordance with local and international rules and regulations
- ❖ Documentation handling

TOYO ENGINEERING PROJECT

SERVICES PROVIDED:

- ❖ Ro Ro jetty construction at Kianly;
- ❖ Vessels offloading and terminal handling in port Turkmenbashy for GC, ODC and HL units;
- ❖ Delivery of cargoes from port Turkmenbashy and Kianly jetty upto TGPC site;
- ❖ ODC permissions obtaining;
- ❖ Route preparations and convoys arrangement;
- ❖ Construction of by-passes;
- ❖ Sea barge chartering and agency service;
- ❖ Barge ballasting and assistance in roll off operations at RO-RO jetty;
- ❖ Customs brokerage;

For implementation of this project, we constructed Ro-Ro jetty in Kianly. Freight Barge and tug boat for pulling HL/ODC items from Turkmenbashy port directly to Kianly. Altyn Yoda Logistics executed overall offloading & loading operations in Turkmenbashy port. Max. piece was transported on barge 163MT, 145MT and 205MT average. Total quantity to be transported is 50 HL/ODC pieces.

In August'2016 Altyn Yoda Logistics executed the offloading at Turkmenbashy port and further roll on/roll off operations by SMPT 40 axles trailers from Ro-Ro jetty Kianly of Polypropylene and Ethylene fractionators which arrived from Constanta port, weighing 534MT and 343MT respectively.

Project: TGPC PROJECT

Plant: Gas Separation, Ethane Cracker and Polypropylene Units plant

Client: Toyo Engineering Corporation

Consignee: State Concern "TURKMENGAS"

Duration: April 2015 – November 2016

Total tonnage: 18 392 tons

Total volume: 85 025 FRT

TERMINAL CRANE MTC-15

LOAD CAPACITY

630 MT

Working in places only accessible via «the path less travelled», throws many challenges for transporting heavy cargo and Altyn Yoda Logistics loves a challenge. With the MTC 15, we have created a unique piece of heavy lifting equipment which can open up better routes for moving heavy loads.

In addition to its maximum lifting capacity of 600 tons, it has a maximum load moment of 15,000 ton meter, comparable to a 1,250 ton crawler crane. No other heavy lifting device on the market combines the MTC 15 features with such high lifting capacity. It also provides quick lifting and boom movements, with a lifting speed of up to 1.6 m/min delivered by four 22 ton winches.

Working with Altyn Yoda Logistics company guarantees high levels of quality and safety. Both by working with clients to optimize their logistics chains and by providing the highest quality equipment and professionals.

Altyn Yoda Logistics can help improve safety and reduce, environmental risks. Our expertise enables us to identify opportunities at the planning, preparation and execution stages of each project to reduce waste, use less energy and manage risks safely.

Our experience allowing us to use less energy and with highest quality to manage risks during planning, preparation and implementing each project. Using the MTC 15 limits the environmental impacts of a project by reducing transport and using materials on site. The MTC 15 has also been constructed by reusing steel from previous cranes, reducing its environmental footprint. Using sand or water on-site for ballast reduces environmental impacts further.

Road design

Since the establishment of Altyn Yoda Logistics, its offices were opened in all regions of Turkmenistan, it has stable partners in the CIS, Europe and Asia. We have agents in major ports such as Olya, Rostov, St. Petersburg, Russia; Poti, Georgia; Baku, Azerbaijan; Ambarli and Mersin, Turkey; Yokohama, Japan; Huang Pu and Shekou, China which allows our customers to deliver goods without reducing the quality of services and minimizing transit time.

We are active in the market of cargo transportation and freight forwarding, providing our customers with a full range of transportation (door-to-door) services. Moreover, our team is highly experienced in multi modal, road, rail, sea and air freight delivery.

At the same time, having construction activity, Altyn Yoda Logistics independently carries out the construction of bypass roads on the whole route for project and oversized cargo.

Provision of services for the maintenance and repair of ships take a special place in the economic activity of Altyn Yoda Logistics. Having a trained and certified personnel, we provide three methods of maintenance (technical service) for ship machinery, including for engines :

- Reactive maintenance - before the advent of failure;
- Preventive maintenance - preventive maintenance or service in accordance with the plan;
- Predictive maintenance - maintenance by the condition.

Altyn Yoda Logistics is constantly working to expand its route network, exploring more and more regions. Affordable cost of our services allows our clients to save their money and time resources. Thus, combining old traditions and innovative technology, we achieve the best results.
